# RAJALAKSHMI ENGINEERING COLLEGE
RAJALAKSHMI NAGAR, THANDALAM – 602 105

CS23331
DESIGN AND ANALYSIS OF ALGORITHM LAB

Laboratory Observation Note Book

Name : MAHAASHREE ANBURAJ

Year / Branch / Section : 2nd Year/ AIML / B

Register No. : 231501091

Semester : 3rd Semester

Academic Year : 2024-2025

WEEK – 02
Finding Complexity using Counter Method

1) Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
    int s =1;
    while(s <= n)
    {
        i++;
        s += i;
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.
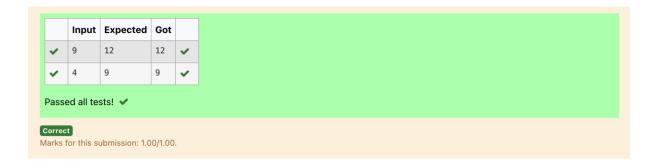

Input:
 A positive Integer n
Output:
Print the value of the counter variable

For example:

Input	Result
9	12

CODE:

```c
#include<stdio.h>
void function (int n)
{
    int c=0;
    int i= 1;
    c++;
    int s =1;
    c++;
    while(s <= n)
    {
        c++;
        i++;
        c++;
        s += i;
        c++;
    }
    c++;
    printf("%d",c);
}
int main()
{
    int n;
    scanf("%d",&n);
    function(n);
}
```

OUTPUT:

	Input	Expected	Got	
✔	9	12	12	✔
✔	4	9	9	✔

Passed all tests! ✔

Correct
Marks for this submission: 1.00/1.00.

2) Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
   if(n==1)
   {
    printf("*");
   }
   else
   {
    for(int i=1; i<=n; i++)
    {
     for(int j=1; j<=n; j++)
     {
       printf("*");
       printf("*");
       break;
     }
    }
   }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.
Input:
 A positive Integer n

Output:
Print the value of the counter variable

CODE:

```c
#include <stdio.h>
void func(int n)
{
   int c=0;
   if(n==1)
   {
    c++;
    printf("*");
    c++;
   }
   else
   {
   c++;
   for(int i=1; i<=n; i++)
   {
     c++;
     for(int j=1; j<=n; j++)
     {
       c++;
       //printf("*");
       c++;
       //printf("*");
       c++;
       break;
     }
     c++;
   }
   c++;
   }
   printf("%d",c);
}
```

```
int main()
{
    int n;
    scanf("%d",&n);
    func(n);
}
```

OUTPUT:

	Input	Expected	Got	
✔	2	12	12	✔
✔	1000	5002	5002	✔
✔	143	717	717	✔

Passed all tests! ✔

Correct
Marks for this submission: 1.00/1.00.

3) Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
  for (i = 1; i <= num;++i)
  {
   if (num % i== 0)
     {
       printf("%d ", i);
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.
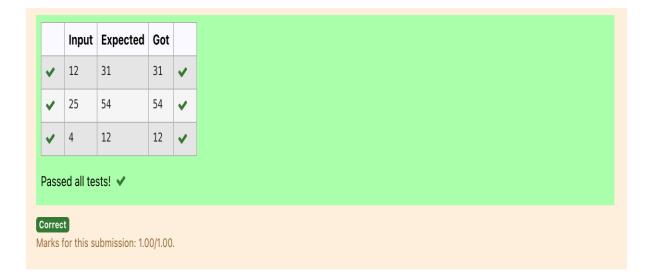

Input:
 A positive Integer n
Output:
Print the value of the counter variable

CODE:

```
#include<stdio.h>
void Factor(int num)
 {
```

```c
    int c=0,i;

    for (i = 1; i <= num;++i)
    {
        c++;
        c++;
        if (num % i== 0)
        {

            //printf("%d ", i);
            c++;
        }

    }
    c++;
    printf("%d",c);

}
int main()
{
    int num;
    scanf("%d",&num);
    Factor(num);
 }
```

OUPUT:

	Input	Expected	Got	
✔	12	31	31	✔
✔	25	54	54	✔
✔	4	12	12	✔

Passed all tests! ✔

Correct
Marks for this submission: 1.00/1.00.

4) Convert the following algorithm into a program and find its time complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

**Input:**
 A positive Integer n
Output:
Print the value of the counter variable

CODE:

```c
#include<stdio.h>
void function(int n)
{
    int count=0;
    int c= 0;
    count++;
    for(int i=n/2; i<n; i++)
    {
        count++;
        for(int j=1; j<n; j = 2 * j)
        {
            count++;
            for(int k=1; k<n; k = k * 2)
            {
                count++;
                c++;
                count++;
            }
            count++;
        }
        count++;
    }
    count++;
    printf("%d",count);
}

int main()
{
    int n;
    scanf("%d",&n);
    function(n);
}
```

2116231501091

OUTPUT:

	Input	Expected	Got	
✔	4	30	30	✔
✔	10	212	212	✔

Passed all tests! ✔

Correct
Marks for this submission: 1.00/1.00.

---

5) Convert the following algorithm into a program and find its time complexity using counter method.
```
void reverse(int n)
{
  int rev = 0, remainder;
  while (n != 0)
  {
    remainder = n % 10;
    rev = rev * 10 + remainder;
    n/= 10;

  }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:
 **A positive Integer n**

2116231501091

Output:
Print the value of the counter variable

CODE:

```c
#include<stdio.h>
void reverse(int n)
{
    int count=0;
   int rev = 0, remainder;
   count++;
   while (n != 0)
    {
       count++;
       remainder = n % 10;
       count++;
       rev = rev * 10 + remainder;
       count++;
       n/= 10;
       count++;
   }
   count++;
   //printf("%d",rev);
   count++;
   printf("%d",count);
}

int main()
{
   int n;
   scanf("%d",&n);
   reverse(n);
}
```

OUTPUT:

	Input	Expected	Got	
✔	12	11	11	✔
✔	1234	19	19	✔

Passed all tests! ✔

Correct
Marks for this submission: 1.00/1.00.
